

# Crewhu Integration Setup

## How to Set Up Crewhu Integration with MSPbots

You can set up the Crewhu integration by applying the Crewhu API key to MSPbots.

- [Create an API key in Crewhu.](#)
- [Configure Crewhu in MSPbots.](#)
- [Test the connection.](#)

Here are the detailed steps that you need to follow:

### 1. Create an API key in Crewhu.

- Log in to CrewHu. Click on **Settings > Integration** link.
- On the Integration page, go to the **Open API** box.
- Click the **+Add** button.
- Name the API key **MSPbots**, then confirm.
- The token appears after the name is confirmed. Click the **Copy Token** button to copy it to your clipboard.

### 2. Configure the Crewhu data source in MSPbots.

- Log in to MSPbots and click **Integrations** on the left pane.

- Search for Crewhu on the **Integrations tab** and select it.
- Paste the token on the **Token** field.

A screenshot of the 'Crewhu' integration configuration form. At the top, it says 'Crewhu' with a logo. Below that, it shows 'Last success auth : 02/16/2022 01:27 CST' and 'Type : null'. There is a field labeled '\* Token :' with a text input box. Below the input box is a green button labeled 'Save And Sync'. There are also some icons on the right side of the form.

- Click **Save and Sync**.

### 3. Test the connection.

a. Do steps 2a and 2b above.

b. Check for the **Connected** and **Success** statuses. You should also see a green triangle that means that the connection is running.

✓ **Connected** 

**Crewhu** Success 

Last success auth : 02/16/2022 01:27 CST    Type : null
