

Crewhu Integration Setup

How to Set Up Crewhu Integration with MSPbots

You can set up the Crewhu integration by applying the Crewhu API key to MSPbots.

- [Create an API key in Crewhu.](#)
- [Configure Crewhu in MSPbots.](#)
- [Test the connection.](#)

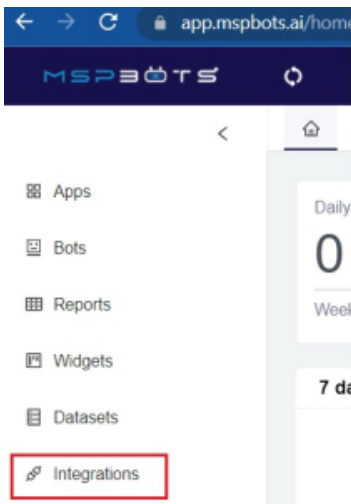

Here are the detailed steps that you need to follow:

1. Create an API key in Crewhu.

- a. Log in to CrewHu. Click on **Settings > Integration** link.
- b. On the Integration page, go to the **Open API** box.
- c. Click the **+Add** button.
- d. Name the API key **MSPbots**, then confirm.
- e. The token appears after the name is confirmed. Click the **Copy Token** button to copy it to your clipboard.

2. Configure the Crewhu data source in MSPbots.

- a. Log in to MSPbots and click **Integrations** on the left pane.

- b. Search for Crewhu on the **Integrations tab** and select it.
- c. Paste the token on the **Token** field.

A screenshot of the 'Crewhu' integration configuration form. The form has a header with the 'crewhu!' logo, the name 'Crewhu', and status information: 'Last success auth : 02/16/2022 01:27 CST' and 'Type : null'. Below the header is a text input field labeled '* Token :'. A green button labeled 'Save And Sync' is positioned below the input field. There are also settings and help icons in the top right corner.

- d. Click **Save and Sync**.

3. Test the connection.

a. Do steps 2a and 2b above.

b. Check for the **Connected** and **Success** statuses. You should also see a green triangle that means that the connection is running.

✓ **Connected** 

**Crewhu** Success 

Last success auth : 02/16/2022 01:27 CST Type : null
