

Chargebee Integration Setup

You need to provide your site domain and API key to connect Chargebee to MSPbots.

To set up MSPbots integration with Chargebee:

1. Configure a domain name in Chargebee.
2. Copy the Chargebee API keys in Settings > Configure Chargebee > API Keys and Webhooks. Click on the API Keys tab.
3. Log in to MSPbots as an administrator and navigate to [Integrations](#).

4. Click on **Chargebee**.
5. Input your site's Chargebee domain and API Key.

A screenshot of the 'Chargebee' integration setup form. At the top, there's a header with the Chargebee logo, the name 'Chargebee', and a status bar showing 'Last success auth : 03/15/2022 11:00 CDT' and 'Type : null'. Below this, there are two input fields: 'Site :' with the value 'yoursitedomain' and 'API Key :' with a masked value. A green 'Save And Sync' button is at the bottom.

6. Click the **Save and Sync** button.
7. Verify your connection. Your integration setup is successful when you see the **Connected** and **Success** statuses. You should also see a green triangle that means that the connection is running.
