# Customer Thermometer Integration Setup

Setting up a Customer Thermometer integration with MSPbots is done by authorizing Customer Thermometer in MSPbots and configuring the data source.

To set up and connect Customer Thermometer:

1. Log in to your Customer Thermometer account.
2. At the top of the page, click on the **Push Options** tab.
3. Find the API Information section on the page and copy the API Key.
4. Go to the MSPbots app and navigate to **Integrations**.
5. Locate Customer Thermometer and paste the API information on the corresponding fields.
6. Click **Save and Sync**.

This procedure is also found in the Customer Thermometer's documentation here.
