

# Continuum Integration Setup

## How to Integrate Continuum with MSPbots:

- [Create the API key in Command](#)
- [Apply the API key to MSPbots](#)
- [Test the Connection](#)

## To create the API key in Command:

1. Log in to your Command account.
2. Click the **Admin** link at the top of the page.
3. Click the **Integration** tab then the **Reporting API** link.
4. Generate the API key and take note of it.

**Important:** If you have previously created a key, a masked key will be shown. See if you can find the old key and use it. Generating a new key will deactivate the old one and will cause issues with other apps that are using it. If you must regenerate the key, save the new one in a safe space and make sure to apply it to the other apps.

## To apply the API key to MSPbots:

1. On the MSPots dashboard, click [Integrations](#).
2. Navigate to the **Search** function and search for "Continuum".
3. Click the **Config** option and enter the API details to the **API Key** field.
4. Click **Save and Sync**.

## Test the connection to verify if the setup is successful.

The datasets and gauges are immediately added to your account and sync begins. The initial sync usually takes 20-30 minutes to complete.
