# Addigy Integration Setup

The following are the steps on how to set up the Addigy API and integrate it with MSPbots.

## To set up the Addigy integration with MSPbots:

1. Generate the Addigy API Key and Secret.
   a. Log in to Addigy and expand Account on the navigation pane.

   b. Select Integrations and click the **+ Add API** button.
   c. Input a name under the **Add API Key** section (e.g., MSPbots) then click **Save**.

d. A pop-up message with the **Client ID** and **Client Secret** appears. Take note of this information.

e. Check the new integration setup in **Account** > **Integration**.

2. Get the Site URL.
   a. Click **Settings** on the far right-hand side of the Addigy screen.
   b. Copy the URL shown in the slide-out panel. This is the site URL for Addigy.

   *Note: You may be asked for a Domain other than the Client Key and Secret. The domain is the Addigy realm like prod.addigy.com where you created the key.*

3. Connect the Addigy API to MSPbots.
   a. Log in to MSPbots and navigate to **Integrations**.

**b.** Select Addigy and key in the **Site**, **Client ID**, and **Client Secret**.

**c.** Click **Save and Sync** button.
